

2-D ADVENTURE – EPISODE 03

Let's add a world to explore in our game!

Computer Term: Tilemaps

Using tilemaps is a very popular technique in 2D game development to build worlds using regular shaped images called tiles.

EXAMPLE:

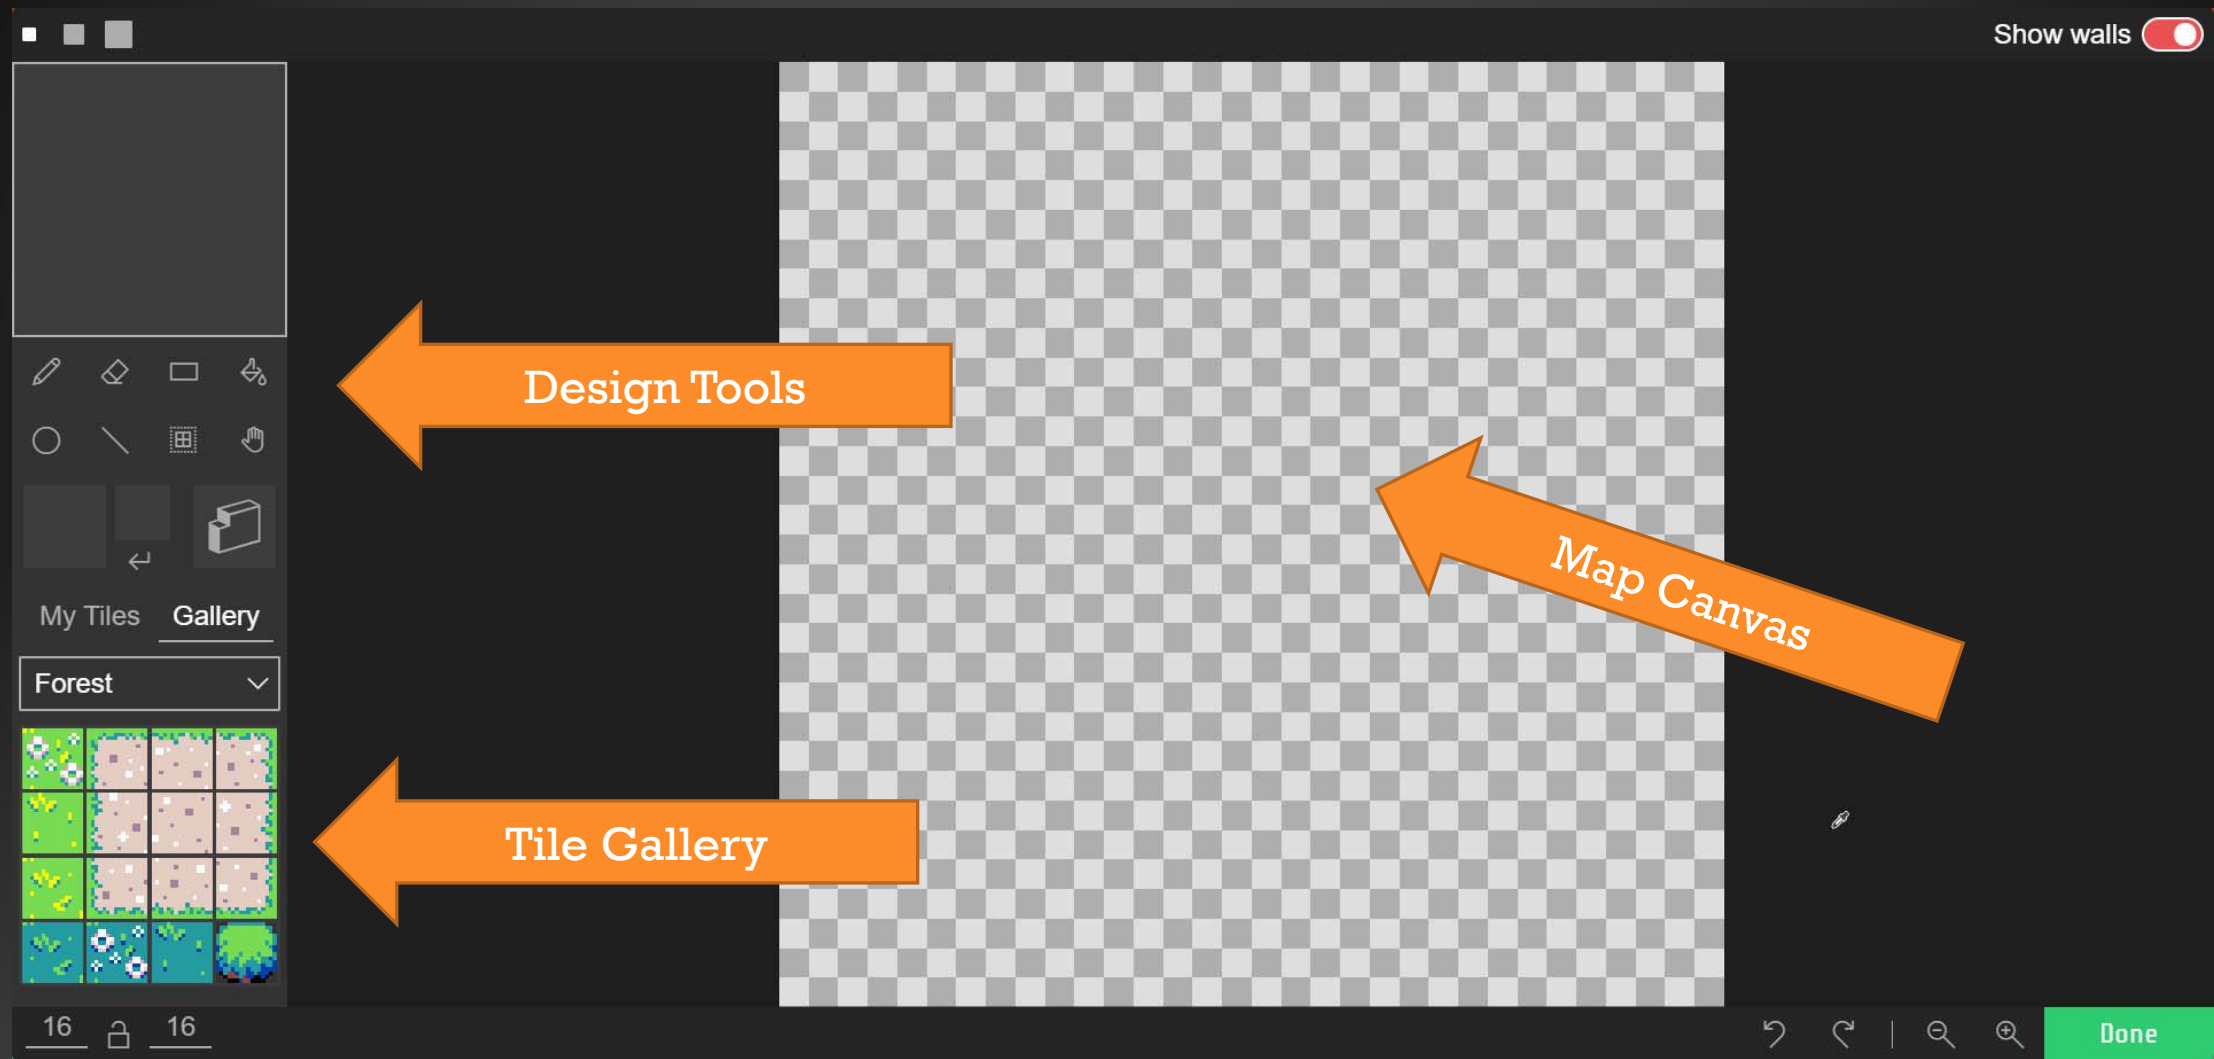

=

Grab the  block
and drag it into the  block

TILE MAP EDITOR

Show walls ☒

Let's create a wall around the outside of our tile map.

Any of the tiles can be turned into a wall

select the "Wall Creation" tool

Also make sure "Show walls" in the top right corner is turned ON

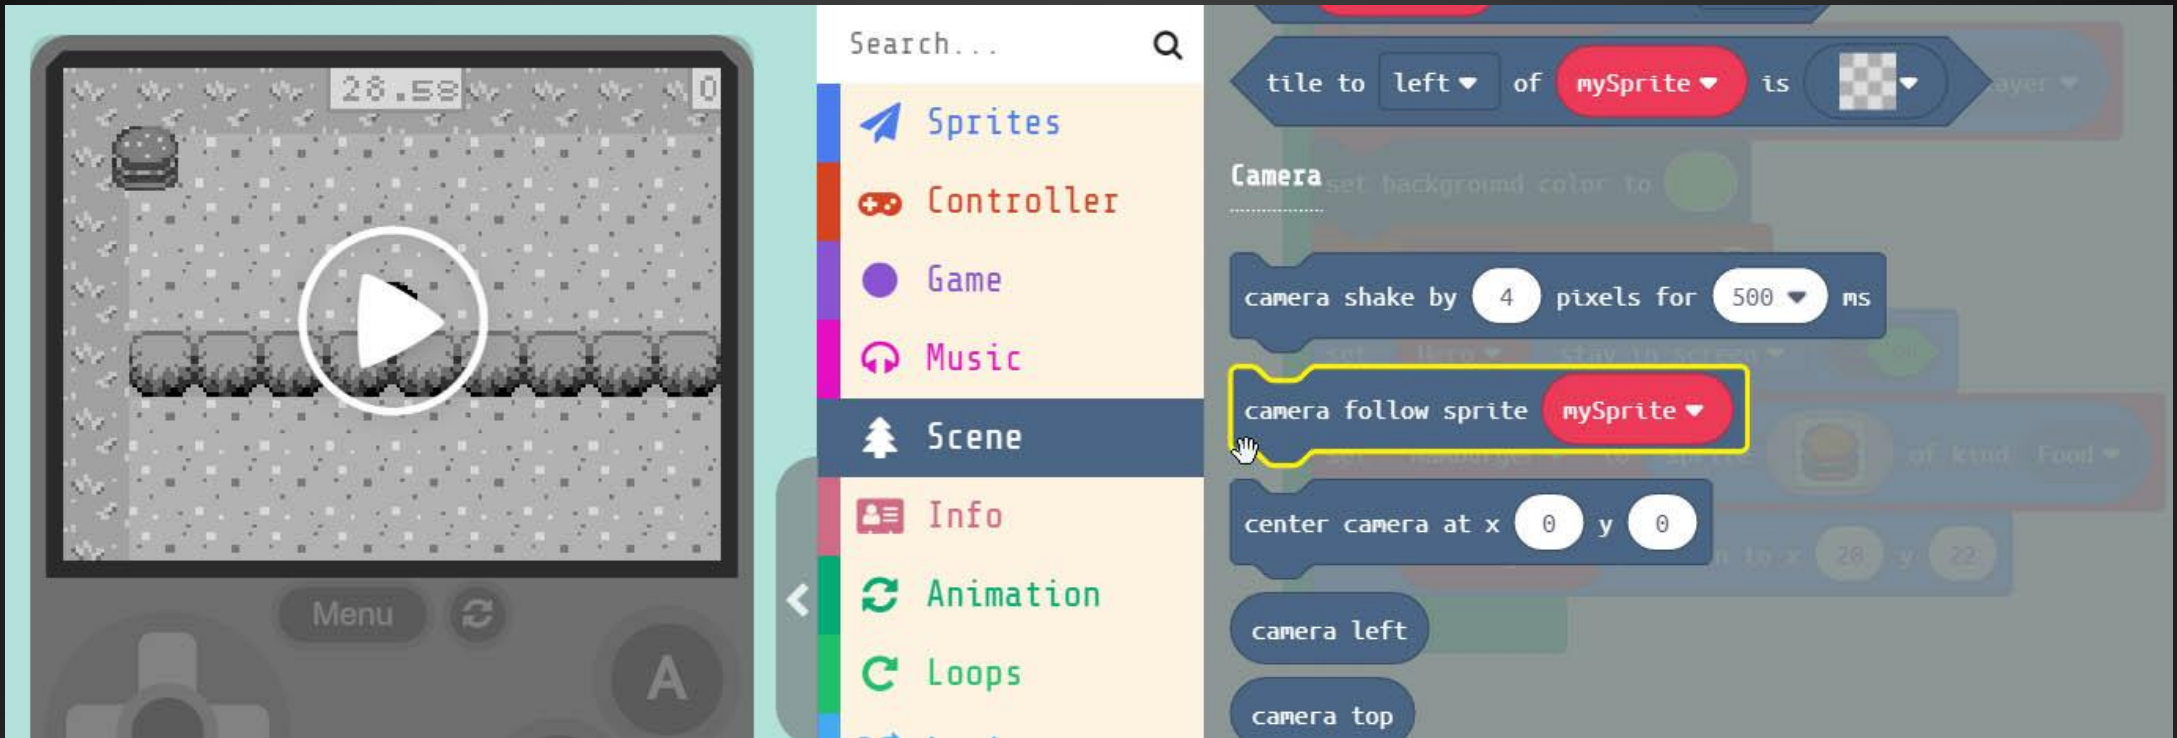

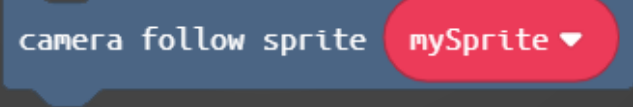

Let's add some rows of bushes
for our 'Hero' Sprite to move around.

Select the bush tile from the 'Tile Gallery'
and let's added it to our Map.

Grab the  block
and drag it into the  block

Change the parameter to 'Hero'
Now the camera will follow our 'Hero'

Change the 'Y' parameter to 220.
We can't use the Sprite positioner
because this is only when positioning
with in the screen size.

Hardware Break

Now let's load what we have on to the BrainPad.

EXTRA
CREDIT

Code to Blocks:

JavaScript:

```
Hamburger.setPosition(Math.randomRange(0, scene.screenWidth()), Math.randomRange(0, scene.screenHeight()))
```

Block:

Code to Blocks:

JavaScript:

```
scene.cameraFollowSprite(Hero)
```

Block:

camera follow sprite **Hero** ▼
